Dayton, OH | +1 937-219-7636 | mallimahalakshmi3@gmail.com | linkedin.com/in/MahalakshmiMalli

Professional Summary

Data analytics-focused Computer Science master's student with hands-on experience building Power BI dashboards and analyzing data using SQL, Python, Excel, Power Query, and DAX. Experienced in data cleaning, data modeling, ETL, statistical analysis, and translating complex datasets into actionable business insights. Developed interactive dashboards and analytical solutions across retail sales, customer behavior, and public-health data.

Education

Wright State University, Dayton, OH, USA Jan 2025 – Dec 2026
Master of Science in Computer Science; GPA: 3.5

Jawaharlal Nehru Technological University Anantapur, India Jul 2020 – May 2024
Bachelor of Engineering in Computer Science; GPA: 3.5

Projects

Bike Sales Analysis Dashboard Excel, Power Query, Power BI, DAX

- Cleaned and transformed 1,000+ customer records using Excel and Power Query, standardized customer attributes, created demographic segments, and prepared structured data for Power BI analysis.
- Built an interactive Power BI dashboard using a structured data model, DAX-based KPIs, slicers, and Excel PivotTable analysis to evaluate purchasing behavior across age, income, commute distance, occupation, gender, and region.
- Identified key patterns including a 58.85% purchase rate in the Pacific region, 61.76% among customers with no cars, and 58.64% among customers commuting 2–5 miles, while using overall purchase rate as a benchmark for comparison.

Global COVID-19 Impact Analysis SQL, SQLite, Power BI

- Analyzed 85K+ COVID-19 records by joining deaths and vaccination datasets and applying CTEs, aggregations, COALESCE, and window functions to evaluate infection, mortality, and vaccination trends.
- Identified major geographic patterns, including 576K+ deaths in the United States, approximately 1.02M cumulative deaths across Europe, and the highest infection rate of 17.13% in Andorra.
- Calculated 150.6M global cases and 3.18M deaths, representing a 2.11% death rate, and tracked country-level vaccination progress using cumulative SQL calculations for an interactive Power BI dashboard.

End-to-End Retail Sales Analytics Python, Pandas, SQL

- Built an end-to-end ETL workflow for 9,994 retail orders using Python and Pandas to clean and transform raw data and engineer discount, sale price, and profit metrics for SQL analysis.
- Applied SQL aggregations, CTEs, and window functions to evaluate product, category, regional, and year-over-year performance across \$2.22M in total sales and \$205K in profit.
- Identified Technology as the highest-sales category at \$806.9K, the West as the top-performing region at \$699.9K, and Chairs as the most profitable sub-category at \$29.8K, while uncovering 2.25% sales growth from 2022 to 2023.

Technical Skills

Business Intelligence & Visualization: Power BI, DAX, Power Query, Data Modeling, Microsoft Excel, PivotTables, XLOOKUP, Google Looker Studio

Languages & Databases: SQL, Python, MySQL, SQLite

Data Analysis: Data Cleaning, Data Transformation, Exploratory Data Analysis (EDA), ETL, Statistical Analysis

Python Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Tools: Jupyter Notebook, MySQL Workbench, Git, GitHub, Google Workspace
