

Maha Lakshmi Malli

Dayton, OH | +1 937-219-7636 | mallimahalakshmi3@gmail.com | linkedin.com/in/MahalakshmiMalli

Professional Summary

Data analytics-focused Computer Science master's student with hands-on experience building end-to-end projects using SQL, Python, Excel, and Power BI. Cleaned and analyzed 96K+ records, developed ETL workflows and interactive dashboards, and applied CTEs, window functions, Power Query, and DAX to uncover customer, sales, and public-health trends. Translated data into quantified insights across \$2.22M in retail sales and global COVID-19 data.

Education

Wright State University, Dayton, OH, USA Jan 2025 – Dec 2026
Master of Science in Computer Science; GPA: 3.5

Jawaharlal Nehru Technological University Anantapur, India Jul 2020 – May 2024
Bachelor of Engineering in Computer Science; GPA: 3.5

Projects

Bike Sales Analysis Dashboard Excel, Power Query, Power BI, DAX

- Cleaned and analyzed 1,000+ customer records using Excel and Power Query, standardizing customer attributes and creating demographic segments.
- Built an interactive Power BI dashboard with DAX-based KPIs and slicers, supported by Excel PivotTable analysis across age, income, commute distance, occupation, gender, and region.
- Identified the Pacific as the highest-purchase region at 58.9%, while 2–5-mile commuters achieved a 58.6% purchase rate compared with 29.7% among 10+-mile commuters; middle-aged customers recorded the highest age-group rate at 54.6%.

Global COVID-19 Impact Analysis SQL, SQLite, Power BI

- Analyzed 85K+ COVID-19 records by joining deaths and vaccination datasets and applying CTEs, aggregations, COALESCE, and window functions to evaluate infection, mortality, and vaccination trends.
- Identified major geographic patterns, including 576K+ deaths in the United States, approximately 1.02M cumulative deaths across Europe, and the highest infection rate of 17.13% in Andorra.
- Calculated 150.6M global cases and 3.18M deaths, representing a 2.11% death rate, and tracked country-level vaccination progress using cumulative SQL calculations for an interactive Power BI dashboard.

End-to-End Retail Sales Analytics Python, Pandas, SQL

- Built an end-to-end ETL workflow for 9,994 retail orders using Python and Pandas to clean and transform raw data and engineer discount, sale price, and profit metrics for SQL analysis.
- Applied SQL aggregations, CTEs, and window functions to evaluate product, category, regional, and year-over-year performance across \$2.22M in total sales and \$205K in profit.
- Identified Technology as the highest-sales category at \$806.9K, the West as the top-performing region at \$699.9K, and Chairs as the most profitable sub-category at \$29.8K, while uncovering 2.25% sales growth from 2022 to 2023.

Technical Skills

Languages & Databases: SQL, Python, MySQL, SQLite

Data Analysis: Microsoft Excel, Power Query, PivotTables, XLOOKUP, Data Cleaning, Exploratory Data Analysis (EDA), ETL, Statistical Analysis

Data Visualization & BI: Power BI, DAX, Google Looker Studio, Matplotlib, Seaborn

Python Libraries: Pandas, NumPy, Scikit-learn

Tools: Jupyter Notebook, MySQL Workbench, Git, GitHub, Google Workspace
